AMENDMENTS TO THE ABSTRACT:

Please amend the Abstract as follows:

ABSTRACT OF THE DISCLOSURE

A method of manufacturing a lamination-type piezoelectric element (1)

eomprises: includes forming a ceramic laminated body (10)in which ceramic layers and inner
electrode layers (12)are alternately laminated on each other; and a. A pair of outer electrodes

(18)are respectively joined to a pair of joining faces (15)formed on an outer circumferential face
of the ceramic laminated body (10). A belt-shaped outer circumferential groove portion

(120)coming into contact with an outer circumferential end portion (127)of at least some part of
the inner electrode layers (12)is formed on the outer circumferential face of the ceramic
laminated body (10). This outer circumferential groove portion (120)has at least one dent
portion (121)protruding from the adjoining portion. The outer circumferential groove portion

(120)has at least one of an insulating portion (181)made of insulating material and a conductive
portion (183)made of conductive material.
